**DIZ:**
Armadillo   By-Passer

**How to Install Armadillo Protected Software to your PC**
Instruments: ArmaReg.exe; REAL set of _Name_Key_FingerPrint

In order to Install arma_protected app to your PC you need <u>CORRECT</u> set of
**HardWare FingerPrint: + Name: + Key**

1. Install and start arma_protected app, that you need.

2. <u>DO NOT CLOSE</u> this window.
3. Start ArmaReg.exe utility

4. Now have a look at the HardWare Finger-Print. For instance, you have <u>40B6-E3BA</u> from your PC after the installation. Compare this Finger-Print with those of another registrant. The Reg_Data must be correct, not from your head but from real source. For instance you have the value <u>7AA9-5816</u> in the correct set of *_Name_Key_FingerPrint* from another registrant Now we must exchange FingerPrint of your PC for the FingerPrint of correct set.
6. In the check-box "Searsch" input the value of your PC FingerPrint
7. In the check-box "Replace" input the value of correct set of *_Name_Key_FingerPrint* from another registrant.
8. Find the name of your app in the box "Proc Name". Find and choose process "Enter Key" to this app.
9. Press "Replace" button

10. Wait some time. The process can take much time on P-I/P-II PC. Then you will get:
!- 0010F810 = 40B6E3BA find
11. Press "Peplace" button. And you will get
!- 0010F810 = 7AA95816 replace.
12. Press "Next" button until you get
!- Done
14. Close Armager.exe and intup _Name_ and _Key_ from another registrant.
